

API Documentation

Elestio is an API first company, everything we do is through API's. Everything we do on our dashboard can be done through our API. We have created an OpenAPI 3 definition with swagger.

Open the [Elestio API documentation](#)

The screenshot displays the Elestio API documentation interface. On the left, a sidebar lists various API endpoints under the 'SERVICES' category. The main content area shows the details for the 'Create a new service' endpoint, including its request body schema and a list of parameters. A 'Request samples' section is visible on the right, showing a sample request body for a POST request to the endpoint `/api/servers/createServer`.

SERVICES

Create a new service

REQUEST BODY SCHEMA: application/json
