

API Documentation

Elestio is an API first company, everything we do is through API's. Everything we do on our dashboard can be done through our API. We have created an OpenAPI 3 definition with swagger.

Open the [Elestio API documentation](#)

The screenshot displays the Elestio API documentation interface. On the left, a sidebar contains the 'elestio' logo and a search bar. Below the search bar are navigation menus for 'AUTHENTICATION' and 'SERVICES'. The 'SERVICES' menu is expanded, showing a list of endpoints with their methods (POST, GET, PUT) and brief descriptions. The main content area is titled 'SERVICES' and features a section for 'Create a new service'. Below this title, it specifies the 'REQUEST BODY SCHEMA: application/json' and lists the following parameters:

- token**: string, User token for Authentication
- templateID**: string, Template id of the service which user wants to create
- serverType**: string, Type of the service server.
- datacenter**: string, The datacenter from where the server will be hosted
- serverName**: string, Name of the server given by user
- appid**: string, Application id
- data**: string
- support**: string, Level of the support plan chosen for the server
- projectId**: string, Project id for the selected service
- version**: string, Version of service software

Below the parameters, there is a 'Responses' section. To the right, a dark-themed panel shows a 'Request samples' section for the endpoint `POST /api/servers/createServer`. It includes a 'Payload' tab with a 'Shell + Curl' button and a text area containing a JSON payload:

```
{
  "token": "gx45xxxXuZ5P2xs8dXXRHpV8",
  "templateID": "38",
  "serverType": "SMALL-1C-2G",
  "datacenter": "fsn1",
  "serverName": "ubuntu-3dfd",
  "appid": "Cloudxx",
  "data": "data",
  "support": "level1",
  "projectId": "17734567",
  "version": "1"
}
```

Below the payload, there is a 'Response samples' section showing a '200' status code and a text area for the response body.

Revision #2
