

# Documentation

With Elestio's [Terraform](#) provider, you can use an open-source infrastructure as code software tool to declare and manage your cloud services.

The screenshot shows the Elestio Terraform provider documentation page on the Terraform Registry. The page has a purple header with the Terraform logo, a search bar, and navigation links for 'Browse', 'Publish', and a user profile. A button 'Use Terraform Cloud for free' is also present. Below the header, the page title 'elestio' is shown, along with 'Providers / elestio / elestio / Version 0.3.0' and a 'Latest Version' button. The main content area is titled 'Elestio Provider' and features the Elestio logo. It describes Elestio as a fully managed DevOps platform and explains that the Elestio Provider allows deploying services with Terraform, requiring an active account. It provides links for 'Pricing' and 'Signup' and a URL 'https://elest.io/'. A note mentions that the navigation menu on the left provides details about resources and guides. An 'Example Usage' section shows a Terraform configuration snippet for the Elestio provider, including required providers, source, version, and provider configuration with email and api\_token. On the right, a 'ON THIS PAGE' sidebar lists links for 'Example Usage', 'Authentication', 'Schema', and 'Secrets and Terraform state', along with a 'Report an issue' link. A left sidebar titled 'ELESTIO DOCUMENTATION' contains a search bar and a list of links for 'elestio provider', 'Guides' (get-started), and 'Resources' (a long list of resource names).

**elestio** Overview Documentation Settings USE PROVIDER

**Elestio Provider**

**elestio**

Elestio is a fully managed DevOps platform to deploy your code and open-source software.

The Elestio Provider allows you to deploy your services with Terraform. You must have an active account with Elestio. [Pricing](#) and [Signup](#) informations can be found on Elestio website <https://elest.io/>.

— The navigation menu to the left provides details about the resources that you can interact with (Resources), and a guide (Guides) for how you can get started.

**Example Usage**

Terraform **0.13** and later:

```
terraform {
  required_providers {
    elestio = {
      source = "elestio/elestio"
      version = "0.2.0" # check out the latest version in the release section
    }
  }
}

# Configure the provider
provider "elestio" {
  email = "<elestio_email>"
  api_token = "<elestio_api_token>"
}
```
