

# Documentation

With Elestio's [Terraform](#) provider, you can use an open-source infrastructure as code software tool to declare and manage your cloud services.

The screenshot shows the Terraform Registry page for the Elestio provider. The header includes the Terraform logo, a search bar, and navigation links like 'Browse', 'Publish', and 'Use Terraform Cloud for free'. The breadcrumb trail shows 'Providers / elestio / elestio / Version 0.3.0 / Latest Version'. The main content area is titled 'Elestio Provider' and features the Elestio logo. It describes Elestio as a fully managed DevOps platform and explains that the Elestio Provider allows deploying services with Terraform, requiring an active account. It provides links for pricing and signup. A navigation menu on the left lists various resources and guides. On the right, there's a 'ON THIS PAGE' section with links to 'Example Usage', 'Authentication', 'Schema', and 'Secrets and Terraform state'. Below the main text, there's an 'Example Usage' section showing a Terraform configuration snippet for the Elestio provider, including required providers, source, version, and provider configuration with email and api\_token.

**Elestio Provider**

Elestio is a fully managed DevOps platform to deploy your code and open-source software.

The Elestio Provider allows you to deploy your services with Terraform. You must have an active account with Elestio. [Pricing](#) and [Signup](#) informations can be found on Elestio website <https://elest.io/>.

— The navigation menu to the left provides details about the resources that you can interact with (Resources), and a guide (Guides) for how you can get started.

**Example Usage**

Terraform **0.13** and later:

```
terraform {
  required_providers {
    elestio = {
      source  = "elestio/elestio"
      version = "0.2.0" # check out the latest version in the release section
    }
  }
}

# Configure the provider
provider "elestio" {
  email    = "<elestio_email>"
  api_token = "<elestio_api_token>"
}
```

See the [Elestio Terraform provider documentation](#) to learn about the services and resources,

and visit the [GitHub repository](#) to report any issues or contribute to the project.
