How to resolve the Borg acquire lock in remote backups.

If you see the following error when listing, restoring, or taking manual backups for your Borg remote backups.

```
Failed to create/acquire the lock /root/.cache/borg/f80e5dfd25cb9/lock.exclusive (timeout).
```

You may simply solve it by following the instructions below:

- You can connect with the VM terminal and run the below command.

```
borg break-lock BorgRepoName
```

By using the command, you can determine your BorgRepoName

```
cd /opt/borg;
cat backupInfo.sh;
#It will return output like these:
BORG_PASSPHRASE=xxxxxxxxxxxxxxxx borg info ssh://xxxxxxxxxxx.repo.borgbase.com/./repo;
```

The ssh://xxxxxxxxxxx.repo.borgbase.com/./repo; is your Borg repo name. You can use that in the command above.

Example: borg break-lock ssh://xxxxxxxxxxx.repo.borgbase.com/./repo;
