

# Connecting with pgAdmin

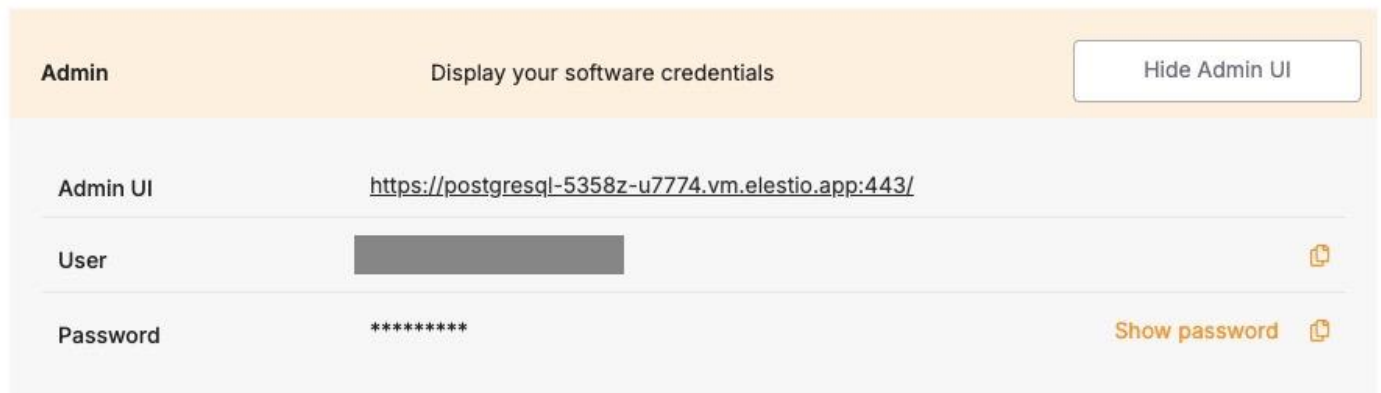

**pgAdmin** is a widely used graphical interface for PostgreSQL that allows you to manage, connect to, and run queries on your databases with ease.

## Variables

To connect using `pgAdmin`, you'll need the following connection parameters. When you deploy a PostgreSQL service on Elestio, you also get a pgAdmin dashboard configured for you to use with these variables. These details are available in the **Elestio service overview page**:

Variable	Description	Purpose
<b>USER</b>	pgAdmin username	Identifies the pgAdmin user with access permission.
<b>PASSWORD</b>	pgAdmin password	Authentication key for the <code>USER</code> .

You can find these values in your Elestio project dashboard under **Admin** section.

## Prerequisites

Make sure the **PostgreSQL** service is correctly deployed on Elestio and you are able to access the Admin section like the one in the image above.

## Setting Up the Connection

1. Launch **pgAdmin** from the Admin UI URL and log in with the credentials acquired in the steps before.

2. Click on **"Create"** and select **"Server..."** from the dropdown, or find **Add New Server** from the quick links

3. In the **General** tab:
  - Enter a name for your connection (e.g., `Trial pgAdmin Connection`).

Register - Server
