

# Delete a member

You can easily delete a member from your project when and if you need to.

Only admins can delete other members.

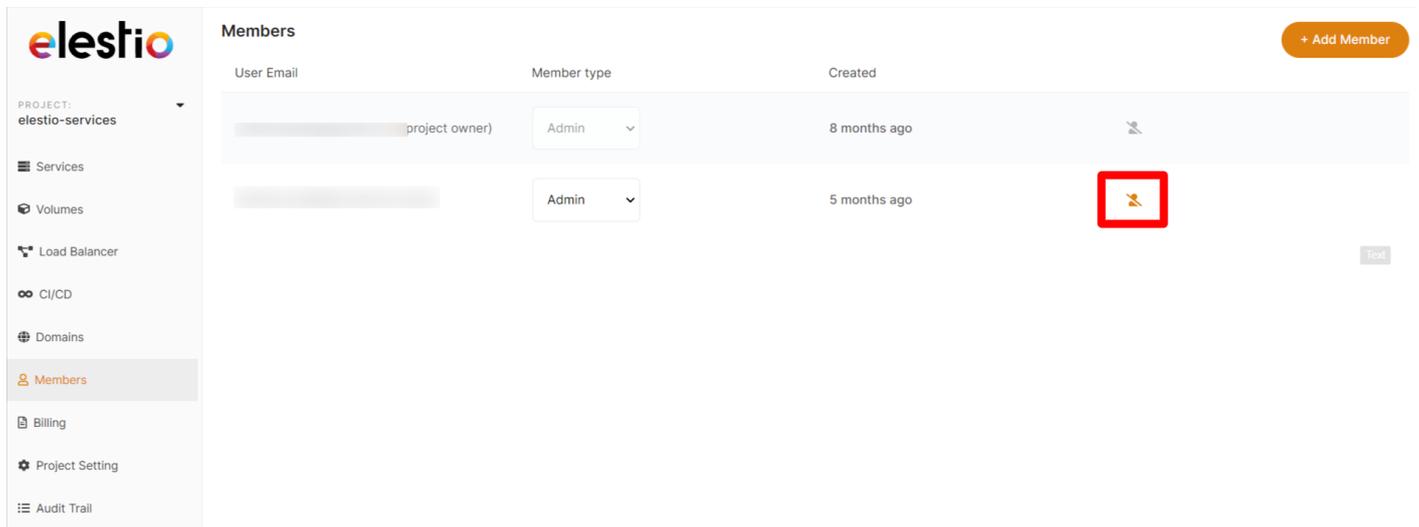

To delete a member:

1. Select **Members** from the Main menu tab on the left of the Dashboard.
2. Click on the user icon to the right of the user you wish to delete.
3. Confirm you really wish to delete the user before pressing **Remove**
4. Deleted users will automatically lose access to your elasticsearch project.

Deleting a member from the elasticsearch dashboard only removes their access to elasticsearch, not your deployed services.

If appropriate, please consider revisiting your service credentials.

The project owner cannot be deleted by other Admins.

The screenshot shows the 'Members' page in the elasticsearch dashboard. The page has a sidebar on the left with the elasticsearch logo and a menu of options: Services, Volumes, Load Balancer, CI/CD, Domains, Members (highlighted), Billing, Project Setting, and Audit Trail. The main content area is titled 'Members' and has a '+ Add Member' button in the top right. Below the title is a table with columns: User Email, Member type, and Created. The table contains two rows. The first row shows a user who is the 'project owner' with a Member type of 'Admin' and was created '8 months ago'. The second row shows another user with a Member type of 'Admin' and was created '5 months ago'. A red box highlights the user icon for the second user. There is also a 'Text' button in the bottom right corner of the table area.

Revision #6
