

Overview

Creating a project assigns you an administrator role as the **project owner**. As an administrator (Admin) you can invite people to a project and assign them specific access.

To invite a member:

1. Select **Members** from the left menu
2. Press the **Add Member** button
3. Enter the member's email address and select their access level
4. **Send Invitation**

The screenshot shows the Elestio interface. On the left is a sidebar with a menu where 'Members' is selected. The main area is titled 'Members' and contains a table with the following columns: 'User Email', 'Member type', and 'Created'. There is an '+ Add Member' button in the top right corner. The table lists two members: one is the 'project owner' with an 'Admin' role, created '8 months ago'; the other is an 'Admin' role, created '5 months ago'. Each row has an icon for actions (a magnifying glass for the owner and a person icon for the admin). A 'Test' button is visible at the bottom right of the table area.

Member Roles:

Admin (Project owner)

When you create a project, you are automatically assigned as a project owner. You can create a service, remove members and create/edit and delete services within your project.

Admin

Administrators are provided full access to services but are unable to create services.

Read-Only

These members are only allowed to view services and are unable to make any changes.

Only Project owner Admins are billed for services within a project.
