

Overview

Creating a project assigns you an administrator role as the **project owner**. As an administrator (Admin) you can invite people to a project and assign them specific access.

To invite a member:

1. Select **Members** from the left menu
2. Press the **Add Member** button
3. Enter the member's email address and select their access level
4. **Send Invitation**

The screenshot shows the Elestio interface. On the left is a sidebar with the 'elestio' logo and a menu where 'Members' is selected. The main area is titled 'Members' and contains a table with the following data:

| User Email | Member type | Created | |
|---------------------------|-------------|--------------|--------|
| [redacted] project owner) | Admin | 8 months ago | [icon] |
| [redacted] | Admin | 5 months ago | [icon] |

An '+ Add Member' button is in the top right, and a 'Test' button is at the bottom right.

Member Roles:

Admin (Project owner)

When you create a project, you are automatically assigned as a project owner. You can create a service, remove members and create/edit and delete services within your project.

Admin

Administrators are provided full access to services but are unable to create services.

Read-Only

These members are only allowed to view services and are unable to make any changes.

Only Project owner Admins are billed for services within a project.
