

# Output Cache

From the Dashboard, navigate to the *Security* tab and select *Show Options* under Output Cache.

From here, you can modify your output cache configurations.

All GET requests are cached for 3 seconds, which is useful in preventing Denial of Service (DOS) attacks.

All services come preconfigured with Output cache by default.

Output cache is used for web traffic only.

The screenshot shows the configuration page for a service named 'redis-bgrkj'. At the top, there is a service status bar with a Redis icon, the name 'redis-bgrkj', a 'Redis' label, a 'Running' status indicator, and three action buttons: 'Open terminal', 'Delete service', and 'Clone this service'. Below this is a navigation menu with tabs for Overview, Tools, Backups, Metrics, Logs, Audit, Security (selected), Alerts, and Notes. The main content area is divided into sections: 'Enable/Disable Firewall' with a warning message and 'Disable Firewall'/'Show Setting' buttons; 'Rate Limiter' with a 'Show Options' button; and 'Output Cache' with a 'Hide Options' button. The 'Output Cache' section is expanded, showing a configuration for 'Cache GET requests for 3 seconde(s)' and a 'Save' button.
