

Admin UI

Most supported softwares have an administrative web interface.

Selecting the *Display Admin UI* button will display the URL, user name and password used to connect to a service's administrative UI.

Some software, especially databases, do not have a web management UI. Use the credentials, and the specified port to connect.

Certain applications do not allow for the pre-creation of administrative users. If the password field appears blank in the service dashboard, visit the given administrative URL to begin the setup process.

The screenshot shows the Admin UI for a service named 'redis-wb6q9'. The service is running and has a 'Running' status. The interface includes a navigation menu with options like Overview, Tools, Backups, Metrics, Logs, Audit, Security, Alerts, and Notes. The 'Termination protection' is disabled. The 'Database Admin' section has a 'Display DB Credentials' button. The 'Admin' section has a 'Hide Admin UI' button. The 'Admin UI' section shows the URL 'https://redis-wb6q9-u76.vm.appdrag.net:24814/'. The 'User' field is 'root' and the 'Password' field is masked with asterisks, with a 'Show password' button.

Field	Value	Action
Admin UI	https://redis-wb6q9-u76.vm.appdrag.net:24814/	
User	root	Copy
Password	*****	Show password Copy
