

# Alerts

Alerts are enabled by default on all new services.

You can enable or completely disable alerts. You can also configure usage limits per resource.

The default cycle duration is 1 minute and you can configure a number of cycles above the limit before sending an alert.

Alerts are sent via email to the server owner's email address on file.

[Apply Changes](#)

Use the settings below to trigger an alert if the resource (CPU, Memory, etc.) stays above a given threshold for more than the specified number of cycles.

Parameter	Threshold	# of Cycles	Edit
CPU	90%	15	
Memory	90%	15	
Swap	75%	15	
Space	80%	15	
Inode	80%	15	
Read Rate	20MB/s	15	
Write Rate	20MB/s	15	
Saturation	90%	15	
Download	25MB/s	15	
Upload	25MB/s	15
