Software & OS Updates configuration

OS & Software updates are enabled by default when you create a new service.

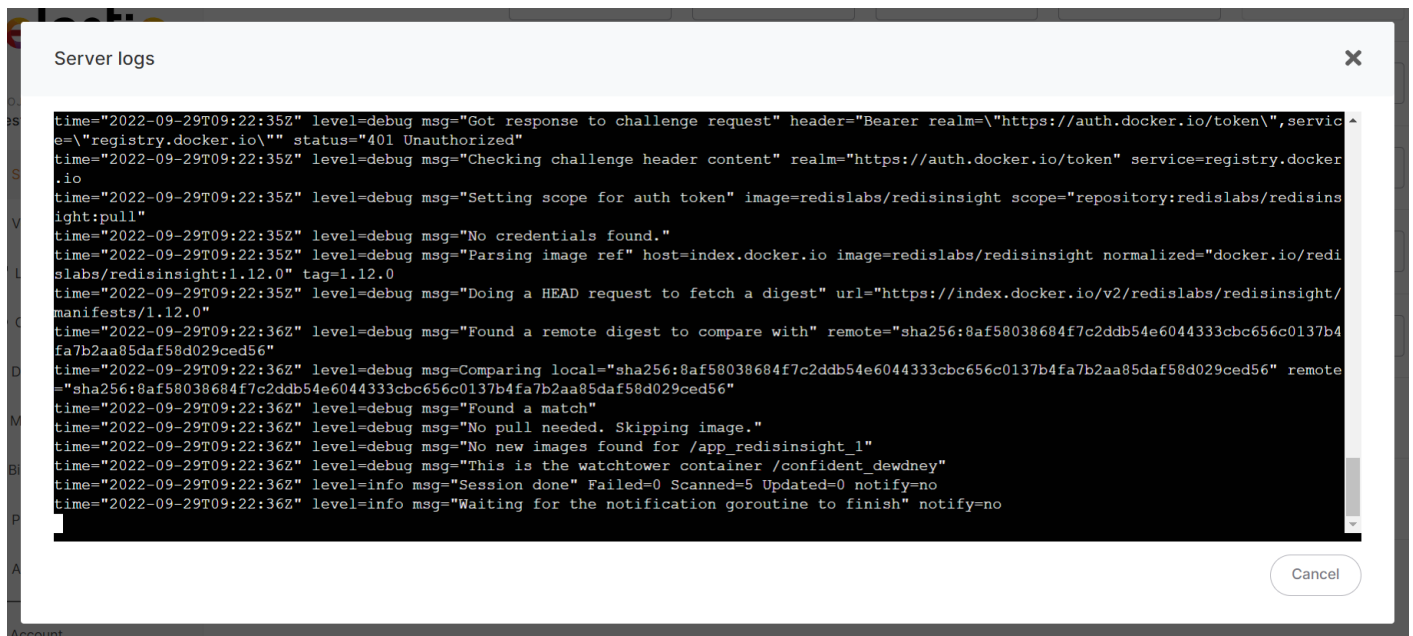

You can configure when updates are applied - by the minute, hour, or day.

All times configured in the dashboard are **UTC (Coordinated Universal Time).**

It's also possible to start an update interactively with the Update now buttons or view logs of previous updates.

Server logs

```
time="2022-09-29T09:22:35Z" level=debug msg="Got response to challenge request" header="Bearer realm=\"https://auth.docker.io/token\",service=\"registry.docker.io\"" status="401 Unauthorized"
