

Supported Softwares

Our catalog is comprised of over 400+ open-source software services. We plan to continue adding to our catalog each month, so keep checking back for new additions!

For each supported software, we prepare a fully managed lifecycle process.

This includes:

Setup script based on docker-compose

Scripts for several phases: pre-backup / post-backup / pre-restore / post-restore (this is to ensure that backups are consistent and correctly backed up and restored).

Tests / Benchmark / Maintenance / Upgrade scripts

We focus on software that's:

Web UI available

API access available

Safe and secure

Frequently updated and well-maintained

Popular and in-demand

You can find the full list of software we support here:
