

# Connecting with pgAdmin

**pgAdmin** is a widely used graphical interface for TimescaleDB that allows you to manage, connect to, and run queries on your databases with ease.

## Variables

To connect using `pgAdmin`, you'll need the following connection parameters. When you deploy a TimescaleDB service on Elestio, you also get a pgAdmin dashboard configured for you to use with these variables. These details are available in the **Elestio service overview page**:

Variable	Description	Purpose
<code>USER</code>	pgAdmin username	Identifies the pgAdmin user with access permission.
<code>PASSWORD</code>	pgAdmin password	Authentication key for the <code>USER</code> .

You can find these values in your Elestio project dashboard under **Admin** section.

The screenshot shows the 'Admin' section of the Elestio dashboard. At the top, there's a header with 'Admin' on the left, 'Display your software credentials' in the center, and a 'Hide Admin UI' button on the right. Below this, there's a table with three rows: 'Admin UI' with the URL 'https://timescaledb-gjZjy1-u7774.vm.elestio.app:443/', 'User' with a masked value and a copy icon, and 'Password' with masked characters '\*\*\*\*\*' and a 'Show password' button with a copy icon.

Admin	Display your software credentials	Hide Admin UI
Admin UI	<a href="https://timescaledb-gjZjy1-u7774.vm.elestio.app:443/">https://timescaledb-gjZjy1-u7774.vm.elestio.app:443/</a>	
User	[Masked]	[Copy icon]
Password	*****	Show password [Copy icon]

## Prerequisites

Make sure the **TimescaleDB** service is correctly deployed on Elestio and you are able to access the Admin section like the one in the image above.

## Setting Up the Connection

1. Launch **pgAdmin** from the Admin UI URL and log in with the credentials acquired in the steps before.

2. Click on **"Create"** and select **"Server..."** from the dropdown, or find **Add New Server** from the quick links

3. In the **General** tab:
  - Enter a name for your connection (e.g., `Trial pgAdmin Connection`).

Register - Server
